Emergency Department Note

SYNTHETIC DOCUMENT - generated for software testing, not a real patient record

Case ID	SYN-0011	**Age / Sex**	71 / M
Setting	Emergency Dept / TIA clinic	**Primary dx**	Transient ischemic attack

Chief complaint

Transient left arm weakness and slurred speech, resolved before arrival.

History of present illness

While reading, noticed his left hand became clumsy and he could not hold the newspaper; wife noted slurred speech. Symptoms lasted about 20 minutes and resolved completely. No headache, no visual loss, no palpitations.

Past history / medications

Hypertension, hypercholesterolemia, ex-smoker (30 pack-years). Ramipril, simvastatin.

Examination

BP 158/90, HR 74 regular, afebrile. Fully alert and oriented. Cranial nerves normal, power 5/5 in all limbs, speech normal, gait normal. Right carotid bruit. NIHSS 0.

Glasgow Coma Scale

Eyes open spontaneously. Fully oriented and converses normally. Obeys all commands.

GCS on arrival	Score	Response
Eye opening (E)	4	Spontaneous
Verbal (V)	5	5 - Oriented
Motor (M)	6	Obeys commands
TOTAL GCS		**15**

Investigations

CT head: no hemorrhage, no established infarct. CT angiography: 75% stenosis of the right internal carotid artery. ECG sinus rhythm. Glucose 5.5 mmol/L. ABCD2 score 5.

Assessment

Transient ischemic attack in the right carotid territory with symptomatic carotid stenosis. GCS 15 with no residual deficit.

Plan / disposition

Aspirin plus clopidogrel loading, high-intensity statin. Urgent vascular surgery review for carotid endarterectomy within 2 weeks. Admitted to the stroke unit for monitoring.
